Patent No. 5834290
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Bealand, Torbjorn
APPLICANT: Hanseon, Lennart
TITLE OF INVENTION: Recombinant Stratum Corneum Chymotryptic
TITLE OF INVENTION: Enzyme (SCCE)
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     251 CygLysPheThrLysTrplleAsnAspThrMetLysLysHisArg 265
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ZIP: 10036-2787

US-08-930-188-2

INC-08-930-188-2

Sequence 2, Application US/08930188

Patent No. 6093397

GENERAL INFORMATION:

APPLICANT: Dixon, Eric P.

APPLICANT: Little, Sheila P.

TITLE OF INVENTION: RELATED NUCLEIC ACIDS

NUMBER OF SEQUENCES: 3

CORRESPONDENCE ADDRESS:

ADDRESSE: Eli Lilly and Company

STREE: Lilly Corporate Center

CITY: Indianapolis

STATE: Indiana

COUNTY: Indianapolis

STATE: Indiana

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATION SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/930,188

FILING DATE:

Sequence 4, Application US/09027337B
Patent No. 5972616
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: O'Brien, Timothy J.
APPLICANT: Tanimoto, Hirotoshi
TITLE OF INVENTION: TADG-15: An Extracellular Serine Protease Overexpressed in TITLE OF INVENTION: Breast and Ovarian Carcinomas
FILE REFERENCE: D6064
CURRENT APPLICATION NUMBER: US/09/027,337B
CURRENT FILING DATE: 1998-02-20
NUMBER OF SEQ ID NOS: 13
SEQ ID NO 4

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
